

## CPX-ENS

## EMERGENCY NOTIFICATION SYSTEM

Schools strive to provide a safe environment for students, faculty and visitors. In an emergency when seconds count, the ClearPix Emergency Notification System can instantly transmit a detailed message to the radios carried by school resource officers, staff, bus drivers, and local law enforcement if they choose to participate, once a panic button is triggered. The system offers up to four radio frequencies to receive these messages. It also plays a "Lock Down Initiated" message over you existing paging system, text, e-mail and phone call to police dispatch . There is no faster way to notify officers and staff of an emergency.

### Verticals:
